How to sort channels

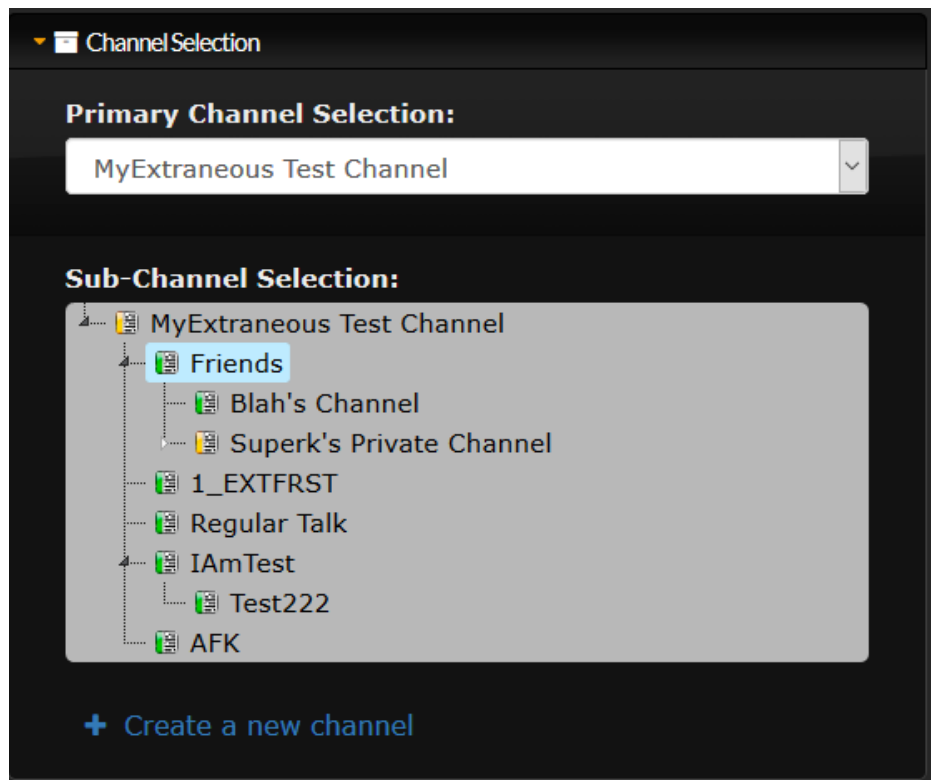

Superk - 2021-05-02 - Commenti (0) - Website

You can only sort your channels through GamersArray Channel Management.

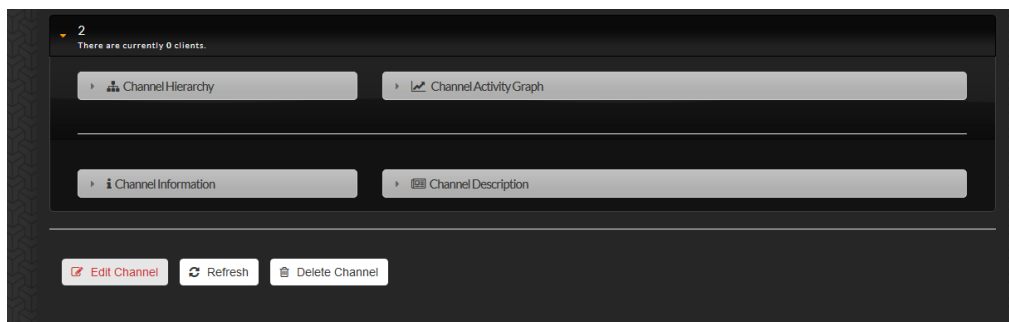

1. Log into GamersArray
2. Click TeamSpeak > Channel management
3. Select your primary channel
4. Select the parent of the channel you would like to move
 1. Example 1: To move Regular Talk to the top, and IAmTest to the bottom I would select MyExtraneous Test Channel

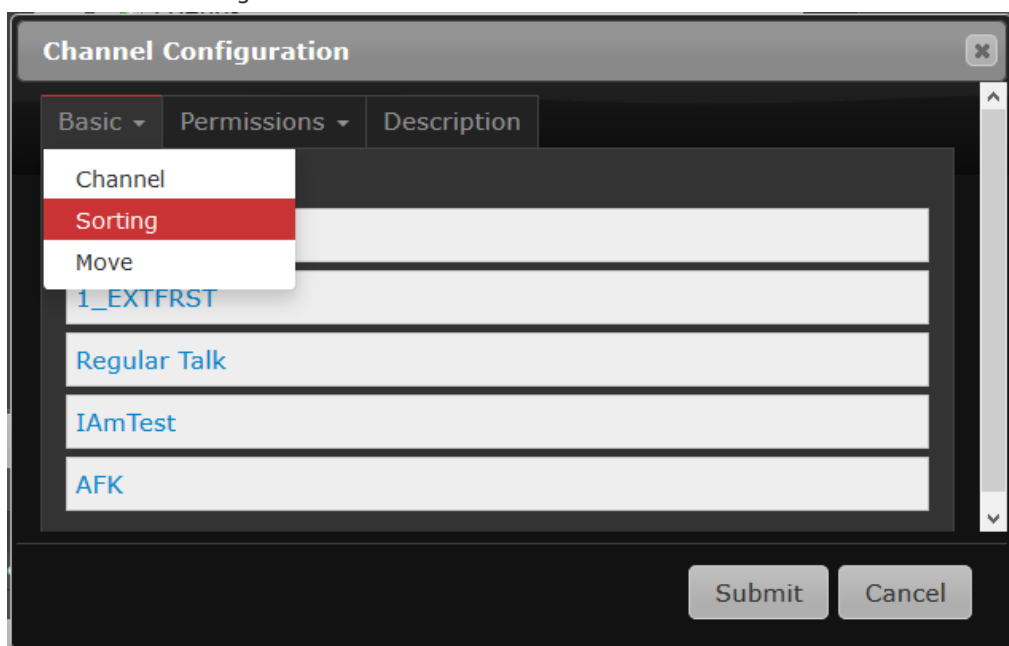

2. Example 2: To move Superk's Private Channel I would select Friends

5. Click Edit Channel at the bottom

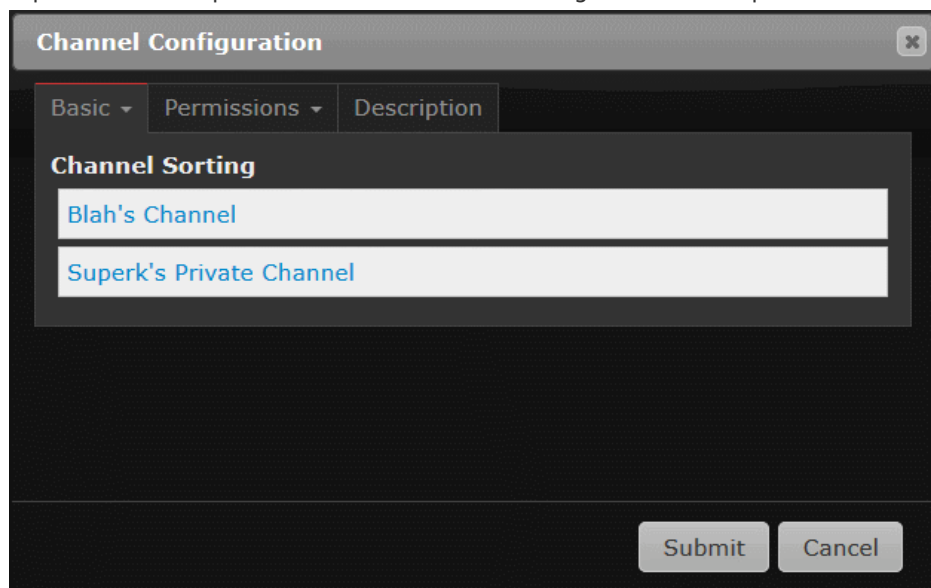

6. Click Basic > Sorting

7. Click and Drag the channels to be in what order you want.
 1. Example 1 (see above, 4-1) I wanted to move Regular Talk to the top, and IAmTest to the bottom so I click Regular talk and drag to the top, then I click IAmTest and drag to the bottom.

2. Example 2 (see above, 4-2) I wanted to move Superk's Private Channel to the top. I will click Superk's Private Channel and drag that to the top.

8. Once all the channels are in the order you want, click Submit.
